Data treatment and model form against PHYS6
no scaling (raw units)
robust scaling (median |x|)
winsorised at the training 99th percentile
asinh-compressed tails
per-trial amplitude-normalised
lateral de-drifted (hold bias removed)
PHYS6, data treatment chosen in-fold
PHYS6, intercept + mirror augmentation
PHYS6 + even descriptors, unconstrained
PHYS6 x log(duration, peak speed)
logistic: all approach chiral features
logistic: forward selection (in-fold, <= 4)
channel set chosen in-fold
temporal filter: yaw + roll + lateral
